CUSHIONING

Multiflex® Technology

Lever arms of the shoe force the foot to make unnatural movements and can lead to foot and Achilles tendon complaints, knee pain and back problems. Furthermore, lever arm forces can increase the risk of injuries such as sprained ankles. Lever arm reduced shoes are characterized by lower heel heights, increased insertion depth, softer material and lesser thickness of the sole, which is rounded in the peripheral areas. A result of the Multiflex® technology is the multiflexible outsole.
