

STEITZ FLEXO

INSTRUCTIONS FOR LACING

Start by lacing the quick lock system of STEITZ FLEXO in the upper part of the shoe.

Thread the rubber lacing crosswise by alternating insertion so that two ends remain with identical lengths.

Now, you need the plastic holder. Tear one end, respectively, from the outward to inward through the two holes of the holder.

DO YOU HAVE A SHOE LACED WITH STEITZ FLEXO?

THEN PLEASE NOTE THE FOLLOWING STEPS FOR THE CUSTOMIZATION FROM HERE:

Put on the shoe. Now the lacing will be adapted to your individual fit. Tighten the laces until the shoe guarantees optimal stability, and now knot the respective end with itself. Attention: Finally tighten the knot only when you have found the correct fitting. The lacing must be tightened so close that the shoes being worn (walking, kneeling etc...) cannot slip off the feet accidentally.

Now cut off the protruding ends after the knot with a pair of scissors. Attention: Do not cut too close to the knot, for otherwise, it could be untangled with time.

In the last step, you still have to turn the plastic holder. The holder consists of two parts which can be turned into each other. For this, just turn the outer envelope around the inner one.
